01. TRADING 101

FOR BEGINNERS

Pili muna kayo kung saan kayo mag trade.

⭕CRYPTO

Apps I use: **Binance**,**Bybit** and **OKX**

❤️Pros

-24/7 Open

-malakas ang movement ng market

-low capital pwede

⛔Cons

-High Volatility (biglang taas/baba)

-Madaming fake hype/scam coins (memes coins)

-expose to emotional trading(madaling ma FOMO)

⭕FOREX

My broker: **ICmarkets** and **XM**.Minsan **exness**.

❤️Pros

-Mas stable compare sa crypto.

-Malinis ang galaw(good for technical analysis)

-May leverage(pwede palakihin ang capital)

⛔Cons

-leverage(double edge sword)

-Pwede ma wipe account pag mali ang risk management

-24/5 (may sessions)

⭕PH STOCKS

I use **Col Financial** and **DragonFi**.

❤️Pros

-less stress

-Good for long term investment

-May dividends or passive income

⛔Cons

-Mabagal ang galaw

-Limited Hours

-Need big capital para ramdam ang kita

TO SUMMARIZE

⭕**Crypto**

-Kung gusto mo fast-paced

-Kaya mo handle stress

⭕**Forex**

-Kung gusto mo structured + technical

-Willing ka matuto ng discipline

⭕**PH Stocks**

-Kung gusto mo safe + long term

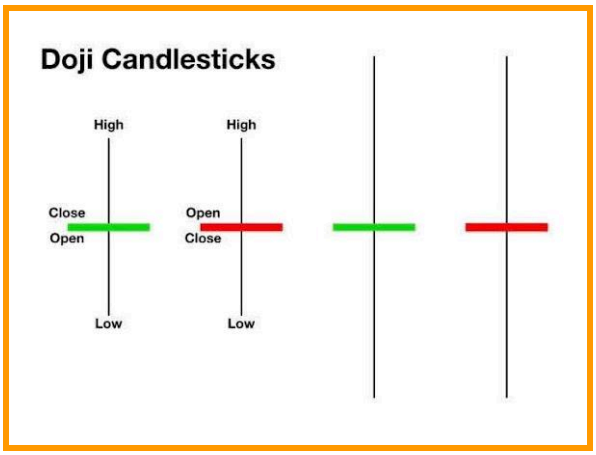

-Hindi ka nagmamadali kumita

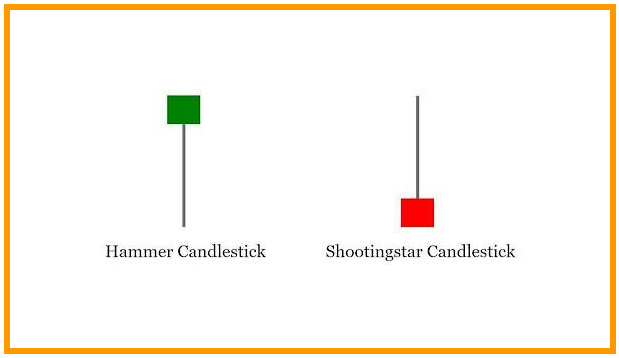

⚠️ REAL TALK

Hindi ka yayaman dahil sa market ha, kikita ka dahil sa disiplina + risk control

02. Basic candle stick pattern

⭕BASIC CANDLESTICK PATTERN

Simulan natin sa 3 basic na pattern.
-Hammer
-Shooting Star
-Doji

⭕HAMMER (bullish signal)

-long lower wick
-small body sa taas

Meaning,
-Price bumaba pero tinulak pabalik pataas ng buyers
-May rejection sa lower price

Best location tignan to,
-Support area
-Downtrend (possible reversal)

⭕SHOOTING STAR (bearish signal)

-Long upper wick
-Small body sa baba

Meaning,
-Price umakyat pero tinulak pababa ng sellers
-May rejection sa higher price

Best location,
-Resistance area
-Uptrend (possible reversal)

⭕DOJI(indecision)

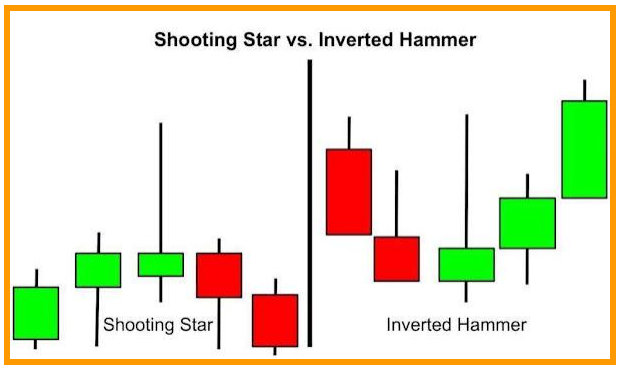

-Maliit or halos walang body
-May wicks sa taas at baba

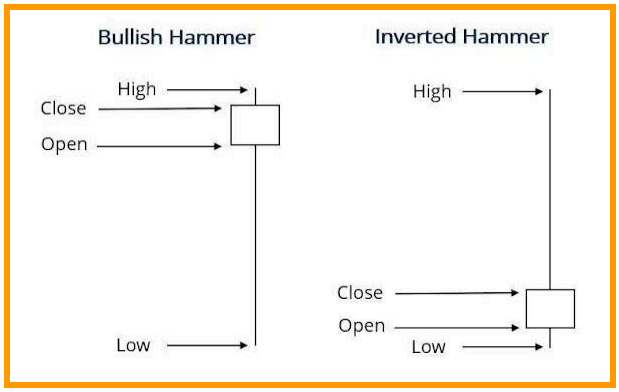

Meaning,
-Walang control (buyers = sellers)
-Indecision sa market

Best location,
-Support or Resistance
-After strong move (possible ranging or reversal)

⭕DIFFERENCE (MADALING TANDAAN)

1.Hammer
-rejection sa support
-possible umakyat ang price
2.Shooting Star
-rejection sa resistance
-possible bumaba ang price
3. Doji
-walang control ang buyer or seller
-wait sa confirmation
-possible ranging

03. Trading Risk Reward

⭕1:2 RR SIMULATION

Setup
Capital: ₱5,000
Risk per trade: 100
Reward per win: 200
RR = 1:2

⭕SCENARIO 1
10 TRADES(50%winrate)
Wins: 5
200 x 5 = 1,000
Losses: 5
100 x 5 = 500
Net = +500
New capital = 5,500

⭕SCENARIO 2
10 TRADES (40% winrate)
Wins: 4 ⟶ 800
Losses: 6 ⟶ 600
Net = +200
New capital = 5,200

⭕SCENARIO 3
10 TRADES (30% winrate)
Wins: 3 ⟶ 600
Losses: 7 ⟶ 700
Net = -100 (talo ka)

📌 Lesson:
Kahit 1:2, kailangan mo pa rin ng at least ~35–40% winrate

⭕LONG TERM (20 TRADES – REALISTIC)
Winrate: 45%
Wins: 9
200 x 9 = 1,800
Losses: 11
100 x 11 = 1,100
Net = +700
New capital = 5,700

🔁 CONTINUATION (COMPOUND)

Next cycle (same performance):
Capital: 5,700
Risk (2%) ≈ 114
Wins: 228 x 9 = 2,052
Losses: 114 x 11 =1,254
Net = +798
New capital = 6,498 (~6,500)

AFTER FEW CYCLES
Start: 5,000
After cycles: 6,500 ⟶ 7,500 ⟶ 9,000+

-Kahit hindi mataas winrate mo

-Lumalaki pa rin account mo

⭕COMPARISON
1:1 RR (same scenario, 45% winrate)

Wins: 100 x 9 = 900
Losses: 100 x 11 = 1,100
Net = -200 (lugi)

⭕FINAL LESSON
Sa 1:2 RR:
-Hindi mo kailangan manalo lagi.
-Kahit mas madami talo ⟶ pwede ka pa rin kumita.

⭕Sa maling RR:
Kahit magaling ka ⟶ pwede ka pa rin malugi.
Hindi mahalaga kung ilan panalo mo—
mahalaga kung gaano kalaki panalo mo vs talo mo.

04. Time Frame

HTF (1H/4H)
Zone + trend lang (no need overconfirm)

LTF (5m/15m)
DITO ka maghihintay ng confirmation (entry trigger)

so if basis mo sa HTF is 1H or 4H

entry mo is 5munites timeframe

1. Higher Timeframe (1H / 4H)

Dito mo titingnan:
-Trend (pataas o pababa)
-Key levels (support/resistance)

2. **Lower Timeframe** (5M / 15M)

Dito ka papasok:
-Hintayin setup (pullback / bounce)
-Confirmation candle
-Dito ka mag entry + SL + TP

05. Leverage and Margin.

⭕LEVERAGE
-parang “hiram na buying power” para mas malaki ang ma control mong trade kahit maliit lang ang capital mo

Example:
Capital mo = $100

1x leverage = $100 position
10x leverage = $1,000 position
20x leverage = $2,000 position

Mas mataas leverage =
✅ mas malaki possible profit
❌ mas mabilis din matalo

kaya bottom line padin dito guys is risk management,stick to LOW LEVERAGE na angkop sa trading style nyo

LEVERAGE DIFFERENCE sa crypto and forex

Crypto
-mas volatile ang market kaya mas risky ang high leverage
-Dahil mabilis gumalaw crypto, kahit maliit movement pwede ka agad ma liquidate lalo na sa 20x–100x leverage.
-kaya pansin nyo sa trading platform ng crypto usually x100 to x125 lang max leverage depende sa votality ng coin
-every coin pwde mo e adjust ang leverage

Forex
-mas maliit galaw compared sa crypto
-kaya napapansin nyo ang leverage sa forex brokers 1:100x,500x,1000x
-mas controlled ang votality
-DAPAT SA LOTSIZE KA MAG CONTROL

⭕MARGIN
-pera mo na ginagamit pang open ng trade

Example:

May $1,000 ka na capital

Nag open ka ng:
$100 trade gamit 1x leverage -$100 margin used

$100 trade gamit 10x leverage ⟶ around $10 lang margin used

Kaya delikado high leverage kasi maliit lang margin pero sobrang laki ng hawak mong position

MARGIN DIFFERENCE sa ng crypo and forex

Crypto
-usually mas mataas requirement dahil volatile market

Forex
-Mas maliit required margin dahil mataas leverage available

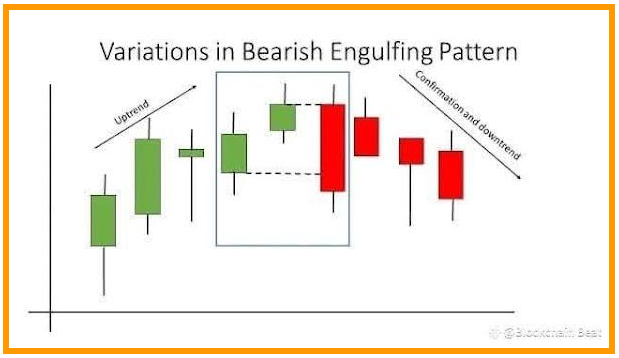

06. ENGULFING PATTERN

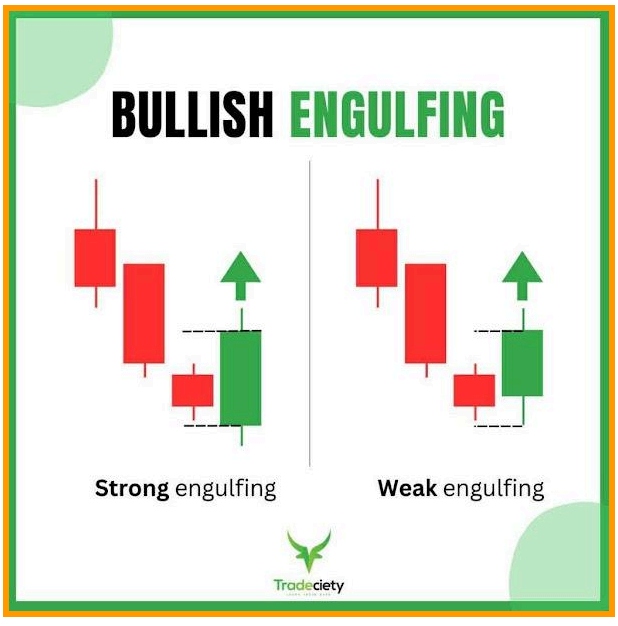

⭕NEXT LESSON: ENGULFING PATTERN

🟢**Bullish Engulfing**
-Nangyayari sa support area
-nilamon ng BIG green candle ang previous red candle
Meaning,
pumasok ang buyers → possible taas

🔴**Bearish Engulfing**
-Nangyayari sa resistance area
-big red candle na nilamon yung previous green candle
-Meaning,pumasok ang sellers → possible baba

07. MARKET STRUCTURE and CONFLUENCE

⭕MARKET STRUCTURE and CONFLUENCE

since yesterday na tackle na natin ang Engulfing, Support and resistance.
Today, pag aralan natin ang context naman ng chart.

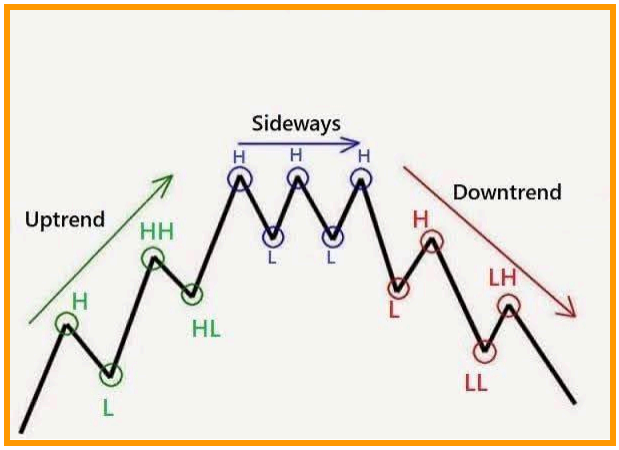

Sa trade kasi 3 ang pinaka foundation for me para mabasa mo ang market.
1. Trend (direction ng price or bias)
2. Zone (support and resistance)
3. Signal (engulfing)

⭕TREND

Uptrend (paakyat)
-pataas ang galaw
-pattern: higher high + higher low

Downtrend (pababa)
-pababa ang galaw
-pattern: lower high + lower low

Sideways
-walang direction ⟶ iwas muna sa trade unless nakatingin ka sa higher TF

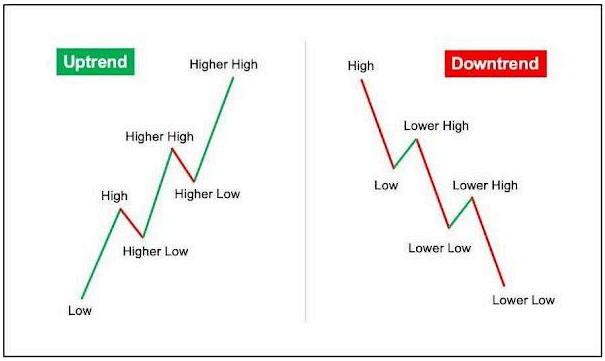

⭕Paano maging valid ang entry

Guys, tandaan nyo to:
Hindi sapat ang engulfing lang.
Kailangan may 3:
1.Trend
2.Support/Resistance
3.Engulfing

⭕Valid Trade
Uptrend + nasa support + may bullish engulfing
= HIGH PROBABILITY BUY

Downtrend + nasa resistance + bearish engulfing.
= HIGH PROBABILITY SELL⭕MARKET STRUCTURE and CONFLUENCE.

since yesterday na tackle na natin ang Engulfing, Support and resistance.

08. Trading

⭕BEFORE ENTERING A TRADE

⭕Tingin muna sa HIGHER TIMEFRAME like 1H/4H
-Hanapin Support and resistance
-Mark mo ang high/Lows (pede higher high,higher low if uptrend, Lower low,lower high if downtrend)

Para malaman mo saan valid mag trade. Wag po entry ng entry sir. May area lang po na SAFE mag entry.

So after mag mark if downtrend or uptrend, ma identify na natin ang bias.
uptrend-focus sa buy
downtrend focus ka sa sell

after mo ma identify lahat ng yan,WAIT ka nalng ma reach yung price ng zone mo sa support ba (buy)or resistance(sell)

if hindi po umabot NO TRADE

if umabot na is saka ka pumunta sa LOWER TIMEFRAME
saka ka maghanap ng candle,
-bearish or bullish engulfing candle (best)
-Rejection (long wick) + follow-through candle
-strong candle(malaki ang body)

no need 3 candles
1 strong confirmation is enough

⭕ENTRY
After confirmation candle closes

Stop loss
Above resistance (sell)
Below support (buy)

Take profit
Next support/resistance
or 1:2 / 1:3 RR

❤️to summarize sir ano ang ggawin
1. support and resistance
2. Trend (HTF)
3. Wait sa zone
4. Engulfing / confirmation (LTF)
5. Entry + SL + TP

09. SUPPORT & RESISTANCE

⭕SUPPORT & RESISTANCE

🟢 SUPPORT
-floor price.
-Dito madalas tumitigil ang pagbaba.
-dito pumapasok ang buyers.
-kaya ang result nitp usually ay umaakyat ang price.

🔴 RESISTANCE
-ceiling price.
-Dito madalas tumitigil ang pagtaas.
-dito pumapasok ang sellers.
-result aybumababa ang price.

⭕SIMPLE WAY TO REMEMBER
Support = BUY area (sa baba)
Resistance = SELL area (sa taas)

Pag nabasag ang support-nagiging resistance.
Pag nabasag ang resistance-nagiging support.

⭕Always remember,
may buy sa support at magbebenta sa resistance, basta may confirmation (engulfing/rejection and etc.)

10. Marking a support and resistance on a time frame.

so if e interpret natin ang chart,

⭕**sa 1H**

SUPPORT ZONE:
Around 4,670 – 4,680
-Maraming beses nag bounce sa price zone na to
-Strong buyers area

RESISTANCE ZONE:
Around 4,730 – 4,750
-Multiple rejection sa taas
-Strong sellers area

BIAS sa 1H
-sideways
-Walang clear uptrend or downtrend
-Price naglalaro lang
between support & resistance

Meaning,
Buy sa baba (support)
Sell sa taas (resistance)

⭕**sa 5m**

CURRENT SITUATION
Price nasa gitna (around 4,710)
not ideal entry

🔔 if sell set up

-wait umakyat sa4730-4750
-hanp ng bearish reversal(bearish engulfing,shooting star)
-entry sa break ng confirmation
-SL sa ibabaw ng resistance (4755)
-TP sa support zone (4670-4680)

🔔 if want mag entry,like gawan nating ng buy set up

-antayin bumaba ang price around 4670-4680
-hanap ng bullish reversal like engulfing or hammer
-entry sa break ng confirmation
-Stop loss sa ilalim ng support like 4665
-take profit sa resitance zone 4730-4750

🔔 so if wlang mahanap na bullish or bearish REVERSAL candle pattern like hammer,shooting star or engulfing.

invalid ang set up-meanign wag mag trade para iwas fake out .

11. ORDER BLOCK

⭕ORDER BLOCK
-ito yung last candle bago nag pump/bagsak ng malakas
-doon pumasok ang malalaking pera
-kaya pag bumalik ang price malaking chance may reaction ulit

NOTE:
Ang tamang pag mark ng BOS ay naka base sa break ng previous HH or LL.
saka hndi tayo basta2 naglalagay ng BOS,inuuna muna natin e identify ang HH at HL.
Kapag malinaw na ang structure, automatic lalabas kung saan ang BOS

⭕BOS vs CHoCH (Simple Difference)
BOS -> continuation (tuloy ang trend)
CHoCH ->possible reversal (nagbabago ang direction)

12. ⭕BOS(Break of structure)

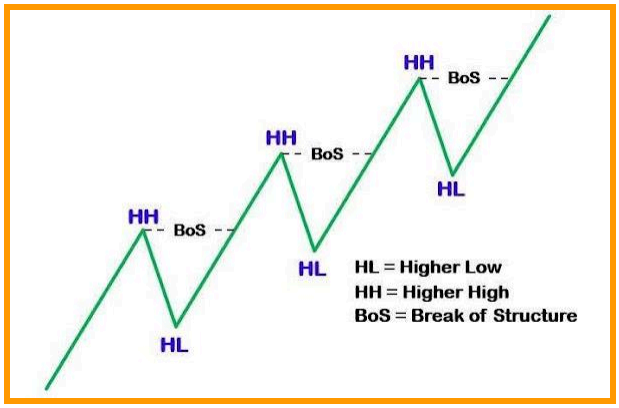

⭕BOS(Break of structure)

-before natin i-identify ang BOS is tignan natin ang trend or takbo ng market.

•Uptrend -> Higher Highs (HH) + Higher Lows (HL)

•Downtrend -> Lower Highs (LH) + Lower Lows (LL)

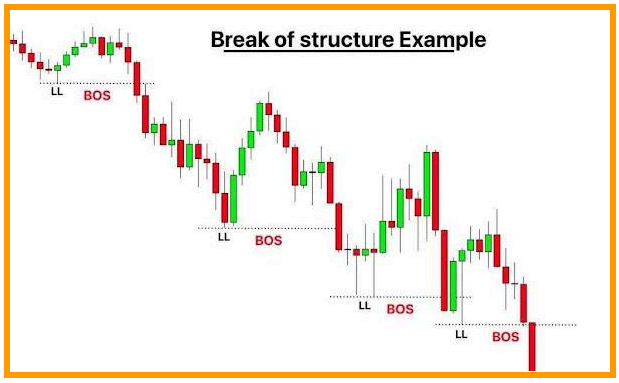

•dito palang alam na natin ang bias if buy ba or sell

•BOS means continuation ng trend or tuloy ang pagtaas or pagbaba ng price

•Sa uptrend
nabreak ang previous High (HH)
ibig sabihin: tuloy ang akyat

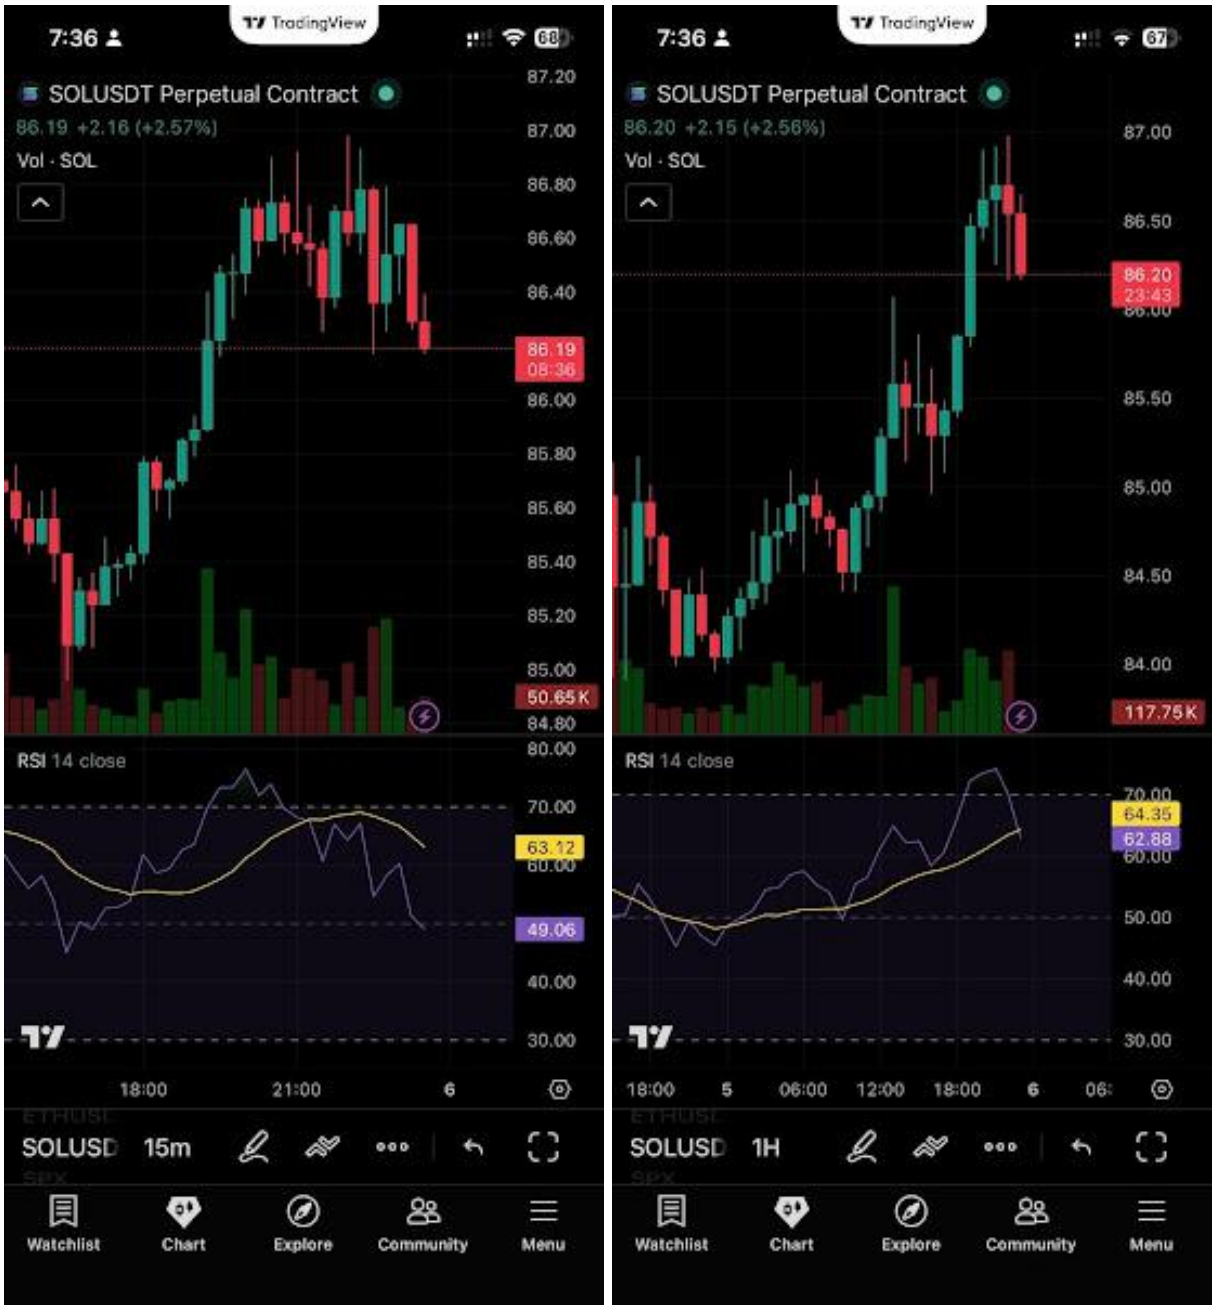

•downtrend

nabreak ang previous Low (LL)

ibig sabihin naman ay tuloy ang baba

13. Manage your risk

Manage your risk
Entry: 86.4 – 86.7
(supply / OB / FVG area)
SL: 87.2 (above HTF resistance)
TP:
TP1: 85.8
TP2: 85.3
TP3: 84.8 (if full pullback)

quick analysis

4H trend bullish
-higher highs + higher lows
-Current situation: Price just tapped ~87 resistance then rejected
RSI: Near overbought -momentum slowing
Support: 85.2 – 85.5 (last strong push base / demand)
No BOS down yet -still bullish, but in pullback phase

MTF (1H)
-Still bullish but losing momentum
-Possible CHoCH forming (lower high + bearish push)
-Rejection candles near resistance = supply present
-FVG (bearish): around 86.4 – 86.8
-Demand / support: 85.6 – 85.8

LTF (15m)
-humihina na
-Clear lower highs
-RSI dropping -momentum shift confirmed
-possible CHoCH already
-Small bearish OB: around 86.5 – 86.7

kaya ako nag short kasi

Respect rejection + CHoCH confirmation

pullback trade lang to ha against HTF trend (scalp / intraday only)

LONG for SOL (Safer but wait tayo)

current condition: Pullback + confirmation

Wait for price to reach:
85.2 – 85.6 demand zone

Then:
-CHoCH on 15m
-Strong bullish displacement,yung malaking green candle

Entry: after confirmation (not blind buy)
SL: below 84.9
TP:
TP1: 86.5
TP2: 87+

itong set up nato align with HTF trend = higher probability swing

14. FIBONNACI

⭕**FIBONNACI RETRACEMENT TOOL**

-ginagamit natin to pra ma identify saan mag bounce ang support and resistance after ng price pullback.

sa tradingview,naka default ang levels sa
.236
.382
.5
.618
.786

ang 0.5 to 0.618 usually ang term na ginagamit nila jan is golden zone since jan kung saan madalas nagre react ang market

so pano gamitin ang tools na yan at pano e plot sa chart.

⭕if **uptrend**
1. hanapin ang lowest point (swing low)
2. i drag papunta sa highest point (swing high)
3. Hintayin bumalik ang price sa 0.5–0.618

⭕if **downtrend**
1. Start sa highest point.
2. drag pababa sa lowest point.
3. mag antay mag pullback sa 0.5–0.618

SO, entry natin nasa 0.5-618 zone tapos SL nasa ilalim or taas ng 0.786 zone depende if uptrend or downtrend

⭕**To sum up**

-Fibonacci = tool para hanapin ang pullback entry
-Best zone mag entry = 0.5 – 0.618
-Always follow trend bago mag entry.
-Mag antay ng confirmation (wag blind entry)

-Bali ito ang FLOW.

⭕higher timeframe (4H/Daily)
-identify mo ang trend
-plot mo ang fibonnaci
-focus ka sa golden zone 0.5-.618
-wait pumunta ang price sa golden zone

⭕saka ka switch to lowertimeframe(5m/15m)
-hanap ka confirmation,confluences like yung past lessons natin na engulfing candles,liquidity sweep and etc.
-saka ka mag entry plus lagy SL at TP

⭕Fibonnaci settings.
Heto kasi naka default setting nato and most of the traders alam yang 0.5-.618 is support or resistance area depende bullish or bearish.

manual set up nyo lang na dagdagan ng 0.705 sa setting ng fibonnaci,then hanap entry sa 0.618-0.705(hanap ng engulfing,liquidity sweep,kahit anong confluence for confirmation ng entry).

15. Reliability on charting

mas reliable long term
-structure / sup and resitance
-EMA trend
-RSI momentum
-FVG / OB / liquidity
-confirmation candles

RSI is more useful in momentum of market.

If above 50 usually bullish momentum, below 50 bearish momentum

Pero hindi rin enough gamitin mag isa kaya importante parin structure at S&R

16. Long and Short set-up

⭕Example Long Setup

HTF,
-Bullish structure
-Price above EMA
-RSI above 50

LTF,
-Price retraces to EMA/FVG
-RSI bounces above 50
-Bullish rejection candle appears

= continuation longorbuy

⭕ Example Short Setup

HTF
-Bearish structure
-Price below EMA
-RSI below 50

LTF:
-Price retraces to EMA resistance
-RSI rejects below 50
-Bearish confirmation candle

= continuation short

17. RSI (Relative Strength Index)

⭕RSI (Relative Strength Index)

RSI is a momentum indicator na ginagamit para masukat ang lakas ng galaw ng market.
Hindi nito pinapakita ang direction ng trend directly ,pinapakita nito kung gaano kalakas ang buying or selling pressure.

🟢Usually ang default setting sa RSI ay
RSI Length = 14
70 = Overbought
30 = Oversold
50 = Momentum Bias

🟢Basic Concept ng RSI

Kapag,
RSI above 70
= malakas ang buying pressure

RSI below 30
= malakas ang selling pressure

RSI above 50
= bullish momentum

RSI below 50
= bearish momentum

Take note guys,
Hindi ibig sabihin ng overbought automatic sell agad.
Hindi rin ibig sabihin ng oversold automatic buy agad.

Sa strong trends, kayang mag stay ng RSI sa taas or baba for a long time. Kaya dangerous mag counter trade gamit lang RSI

⭕Best RSI Usage
Mas effective ang RSI kapag ginagamit for,
-Confirmation
-Momentum reading
-Confluence

Hindi sya magandang gamitin alone for entries.

🔴Common RSI Mistakes
Buy agad sa RSI 30
Sell agad sa RSI 70
Ignore market structure
Ignore trend direction
Using RSI alone

Di ko na e discuss ang rsi divergence kasi ang Kapag nasa overbought or oversold ang RSI,
mas importante na alamin muna natin ang possible bias ng market. After that, saka tayo maghahanap ng confirmations tulad ng BOS,CHoCH,Rejection candles

⭕RSI is only a confirmation tool if malakas ang buying or selling pressure. Price action at structure parin ang priority

18. EMA

⭕EMA (Exponential Moving Average)

Ginagamit ito para makita ang,
-Trend direction
-Dynamic support/resistance
-Momentum continuation
-Market bias

🟢Common EMA Settings
-EMA 20
Short term momentum
-EMA 50
Medium trend
-EMA 200
Overall trend / macro bias

🟢 Basic EMA Concept
Price above EMA=
bullish environment

Price below EMA = bearish environment

🟢EMA as Dynamic Support & Resistance

Sa **uptrend**,
-Madalas mag retrace ang price sa EMA bago mag continue pataas.

EMA acts as support.

Sa **downtrend**,
-Madalas mag reject ang price sa EMA bago bumaba ulit.

EMA acts as resistance.

🟢EMA Slope
-Hindi lang position importante.
-Importante rin angle ng EMA.

EMA sloping upward
= strong bullish momentum.

EMA sloping downward
= strong bearish momentum.

Flat EMA
= ranging or weak momentum.

🔴Kapag sideways market ang EMA is
-Madalas fake signals.
-Price keeps crossing EMA.

Kaya EMA works best sa trending markets hndi sa consolidation.

19. RSI + EMA Application Using Top Down Analysis

⭕**RSI + EMA Application Using Top Down Analysis**

🟢**STEP 1 — Higher Timeframe Bias**
🔑Start sa higher timeframe,4H,Daily,1H
Tapos tignan nyo ang.
-Market structure
-EMA direction
-RSI momentum

Example,
Price above EMA 50
EMA sloping upward
RSI above 50
= bullish bias

🟢**STEP 2 — Wait for Pullback**
🔑Hindi tayo hahabol sa impulsive move
Hintayin natin guys ang
-Retracement
-EMA retest
-FVG revisit(babalikan ang gap)
-Key support/resistance

🟢**STEP 3 — Lower Timeframe Confirmation**
🔑Lipatan lower timeframe,15M/5M
Hanapin naman natin ang
-Rejection candles
-BOS/CHOCH
-RSI holding momentum
-EMA support/resistance respected

⭕Example Long Setup
HTF,
-Bullish structure
-Price above EMA
-RSI above 50

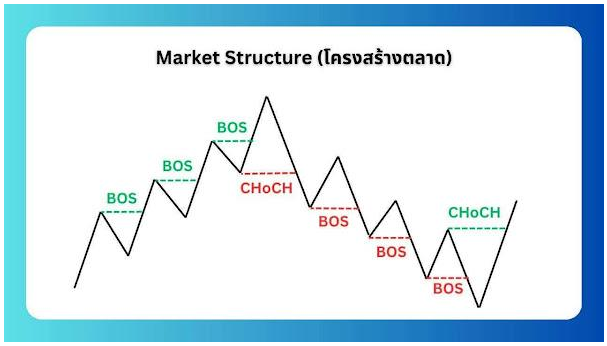

LTF,
-Price retraces to EMA/FVG
-RSI bounces above 50
-Bullish rejection candle appears

= continuation longorbuy

⭕ Example Short Setup
HTF
-Bearish structure
-Price below EMA
-RSI below 50
LTF:
-Price retraces to EMA resistance
-RSI rejects below 50
-Bearish confirmation candle

= continuation short

20. ⭕CHoCH (Change of Character)

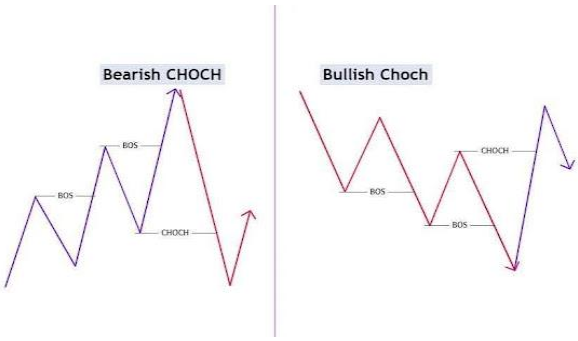

Change of Character Trading Strategy

⭕**CHoCH (Change of Character)**
-possible reversal or shift ng trend

•Example (From Downtrend to Uptrend)
-biglang nabreak ang previous Lower High (LH)
-CHoCH na ⟶ may chance mag reverse pataas

•Example (From Uptrend to Downtrend)
-nabrea@ ang previous Higher Low (HL)
so possible pababa na

21. Set-up on a 4h and 1h window chart with BOS, CHoCH, RSI, EMA,FVG and OB

sa 4H

Overall market structure is strong bullish trend.
-merong higher high(HH),higher low(HL)
-wlang major break of structure

Prove above lahat ng EMA20/50/100/200
-very bullish

RSI aroung 97 so extremely overbought. Meaning trend is very strong BUT chasing entry is risky,high chance pullback before continuation

sa 1H

Still bullish kasi ang recent candles show continuation after consolidation

BOS
Several bullish BOS already happened,
break above 2.48
break above 2.60
continuation toward 2.73+

CHoCH
No confirmed bearish CHoCH yet

RSI
RSI around 79
still bullish momentum

EMA
Price respecting EMA20 nicely
EMA20 acting as dynamic support
Current important support zones:
EMA20 2.40–2.45
EMA50 2.14

Yung sa fart sir
15m

FVG
fvg zones
2.58–2.62
2.48–2.52
2.38–2.44

these are possible retracement zones

Order Block (OB)
Merong strong bullish OB near.
2.45–2.50

Resistance
2.75 psychological area
2.80 possible rejection zone
3.00 major psychological resistance

Support
2.65 minor support
2.58–2.62 FVG support
2.45–2.50 OB + Fib support
2.38–2.40 stronger support

-If mag entry for me safe mag wait ng pullback.
-Entry around 2.58-2.62 na zone.
-Tapos hanap lang ng confirmation,bullish engulfing,strong rejection wick.

-SL below2.52

-TP-2.75 until 3,trailing stop loss lang.

-Ganyan set up natin since very bullish sya pero nasa toktok na.
so best action = Wait for retracement into support/FVG/OB before entering long.

Q&A activity no.1

Coach:
Guys activity tayo. Please pasagot ng mga tanong ko if naintindihan nyo lessons today.

HIGHER TIMEFRAME

Bullish or bearish bias?
Above or below EMA?
RSI above or below 50?
Trending or ranging?

Student:
may nakalagay na RSI-14 yung RSI,

red line ema2
orange-ema50
yang parang green-ema100
blue-ema200

May BOS.

Uptrend/opo nirerespect

Continuation

Waiting for the retest and for a good confirmation candle para sa entry.

Bullish, trending, above ema, rsi near overbought zone

Coach -

tama sir,since bullish ang structure at nirerespeto ang EMA, mas mataas
probability ng continuation kaysa reversal unless may strong bearish confirmation

Q&A activity no.2

Student:
Nag long na ako sa fartcoin sir.
Saan kaya possible mag tp sir.

Coach:
pa explain sir anong basis mo sa long base sa mga lessons natin sir.

Student:
Kung titignan ko po kasi sa 1h tf sir is may dalawang red candle na na reject sa support tas nag form uli nang isang solid green

Coach:
Saan ka nag-entry?

Student:
0.2436 sir
Stoploss ko sa 0.2385
Scalping lang sir

Coach:
okay sir mas healthy yan for scalp continuation.
tama pagkalagay mo dito since below supp and liquidity zone.

kasi pag ako nag entry nyan.

.238-.240 na area ako mag antay

saka hanap ng confirmation bullish engulfing,rejection wick candle,rsi bounce 40-50
tapos tignan dapat price above ema50

SL below .231

tp .258 till .279 mag trail stop nalng
-pullback entry kasi to.

safe entry dapat lagi tayo dito.
PATIENCE PO.
HAYAAN NYO PONG ANG ENTRY POINT or ZONE pupunta sayo,para ikaw mismo ang may control.

Mas maganda gamitin ang 30M OB bilang main zone, tapos ang 5M para sa entry confirmation.
lowertimeframe lagi hahanap ng confirmation sir.

Q&A activity no.3

Coach:
please give me your analysis (4h down to 15m).
then entry,SL and tp.

Student
Downtrend po sa 4h, makikita sya using trendline

Sa 1 hour my big bearish candle (79600) pwede rin mag entry dito.

Sa 15mins my evening star. Ang entry(79419), SL doon sa taas ng resistant (79918), tp (78423) 1:2rr. Sorry po kung magulo nag tatry lang ako mag analyze huhu. Siguro 1month na ako nag-aaral or mag 1month na but still learning parin po sainyo. Salamat po.

Coach
tama ang bias and structure mo sa higher timeframe but in 15m in consolidation phase sya now so maganda wait sa BOS or CHoCH.

pero sa entry medyo mahirap maghabol sa trend,mas maganda abangan ang retest or rejection,BOS or CHoCH before entry.

safe if mag sell around 79,850 (enter basta may rejection wick,bearish engulfing,failed break out above 79.8k sa 15minutes timefram).

TP around 79k pababa trail SL nalng.
SL aroudn 80,250

sa LONG limit namn is if may break out confirmation naman.

dapat may BOS mababuo sa 15m/1H.

or dapat ang 1H candle is mag closed ang price above 79,850-80k.
basta hanap lang tayo lagi ng confirmations before entry since alam naman natin bias.

tama ang bias and structure mo sa higher timeframe but in 15m in consolidation phase sya now so maganda wait sa BOS or CHoCH.

Important Note on Location and time

For forex (major pairs & gold), pinakamagandang days mag trade is Tuesday to Thursday kasi jan madalas may strongest movement at volume

Sa time natin dito sa pinas is

London Session -around 3PM–12AM

New York Session -around 8PM–5AM

best setup usually sa overlap ng London & NY -8PM–12AM PH time kasi dito pinaka malakas volatility lalo na sa GBP/USD, EUR/USD, at Gold.

madalas sa monday is ranging or slow pa market kasi bagong bukas after weekend.

sa **Friday** nman is mag ingat kasi may profit taking at minsan manipulative or biglang reversal lalo na after NY session.

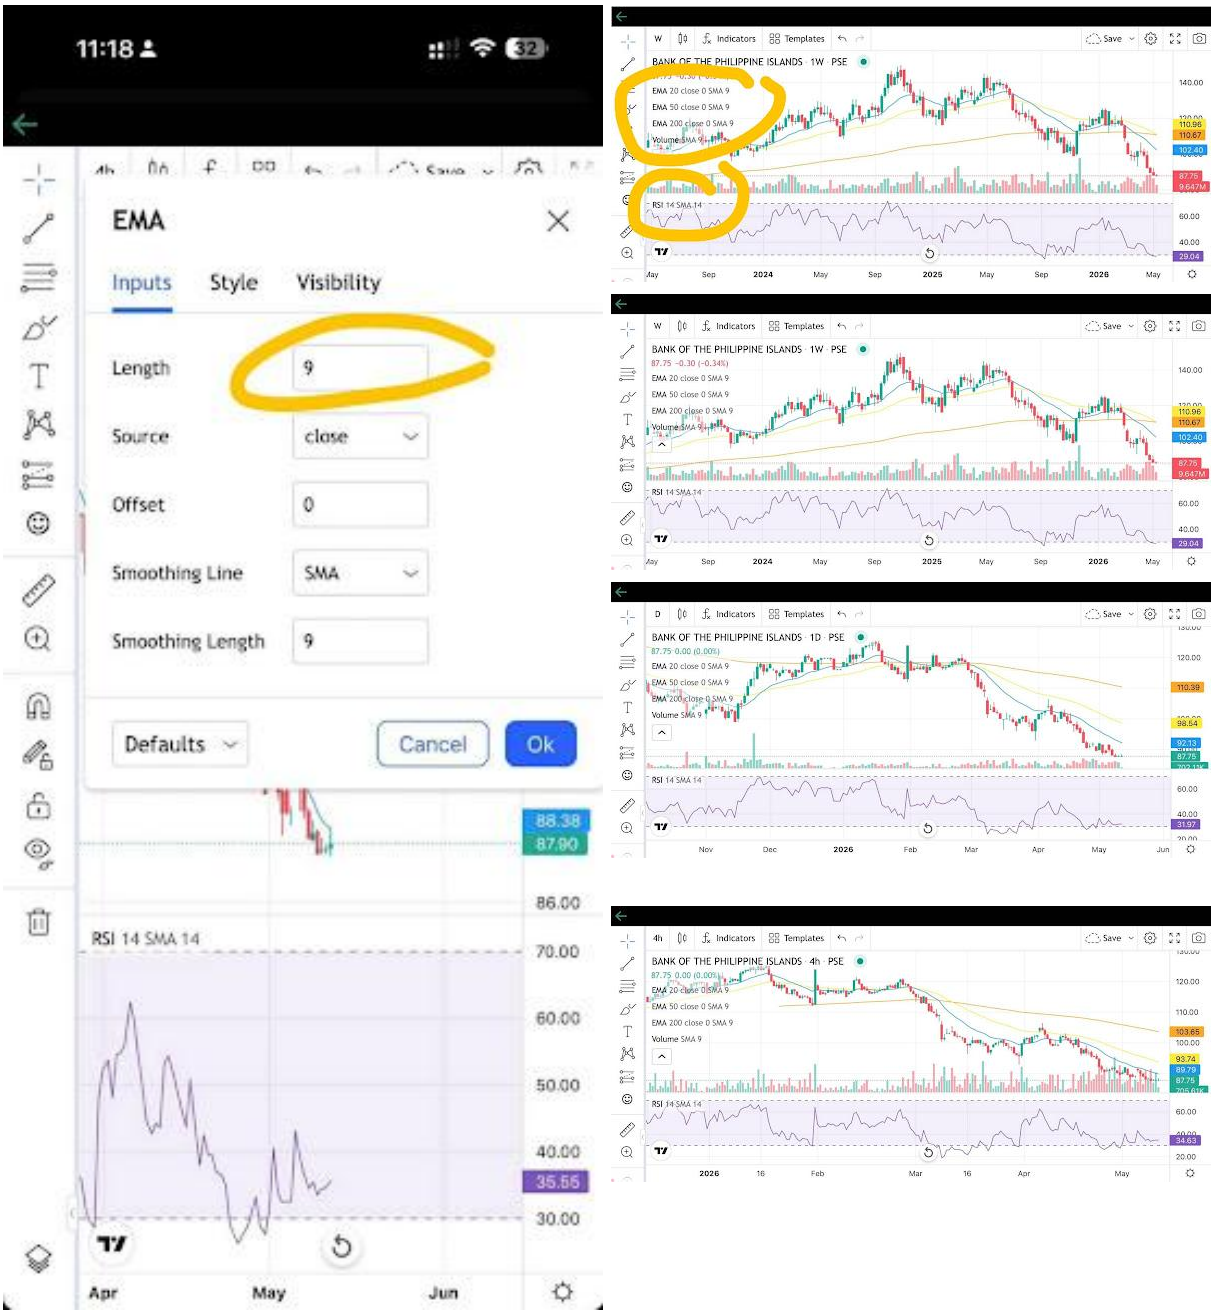

best din if may high impact news
CPI
NFP
FOMC
Interest Rates

kaya bago matulog/charting, check muna economic calendar para alam mo if may major news kinabukasan

I

Lesson on BSP charting

recommeded **timeframe** para sa PHSTOCKS po is
weekly, **daily** and **4H** po since fundamental driven namn po sya meaning ang price
movement nya is naka based earnings/ quarterly reports,interest rates ng BSP,
,nflation,economic growth and iba pang factors.

I
Lesson on BSP charting

gamit tayo chart or technical analysis para sa tamang entry lang.

click nyo po yang **full chart** para malagyan nyo po indicator ang chart nyo.

tapos click mo **indicators** sa taas, type mo lang **RSI** then click mo.
then **type** mo **exponential moving average.**
tapos laabas na yang EMA jan,click mo sya at yung setting ICON ⚙️

palitan mo tang length ng 20.

ulitin mo lang click yung exponential moving average then change ang length sa 50 naman.

then after that 200 naman.

sa Weekly Timeframe

🟢merong major BOS na nabasag 110-112 na price at 98-100 na price kaya lumakas ang sell off.

🟢ang price is nasa ilalim ng ema20,50,200- BASED sa previous lesson natin pag nasa ilalim ng ema ang price BEARISH.

🟢RSI 29-30 nearly oversold na

🟢SUPPORT
85-86 (current support)
80-82 (next possible support if mabasag)
75-major support

🟢RESISTANCE
92-94
98-100
110-major resistance

🟢weekly FVG/OB
around 98-103 and 108-112
(possible institutional sell zone yan if mag rally pa akyat ulit)

merong FVG din sa 92-97 so first target if mag bounce.
kasi maganda RSI at EMA na indicators sa ph stocks.

Daily Timeframe.

hinahanap ko sana CHoCH kaso wla pa hehe need pa e break ang 92 area para may legit na trend shift since anjan FVG natin.

🟢based sa EMA and RSI may trend continuation pa,pero possible may short term bounce dito pero wla pa tlgang reversal.

sa 4H timeframe naman is may consolidation na.
mahina na ang besrish momentum.
possible accumulation area to dito.

need ma break ang 89.5-90 sa 4H timeframe para may temporary bullish or else continuation pababa pa tong price.
